

**Make your own Vigil Lantern.**

**Print out this template,  
or use a blank piece of paper  
and eyeball the shape.**

**Cut out the sector.  
It doesn't have to be exact.**

**Roll it into a cone.  
Tape it to itself, to  
stabilize the shape.**

**Then tape it to the  
end of a flashlight.**

**Apex is  
5½" in from  
the sides.**

**Your printer will presumably  
not print all the way to the edge  
of the page. Don't panic.  
Extrapolate the guidelines.**

**Lower  
corners  
are 2" up  
from the  
bottom.**
